## Legacy email broadcast report access

With the addition of the new email experience, finding reports on emails sent through the legacy builder became difficult to access. This update makes it easy to find legacy email reports with one click from the current email broadcast history page. [Learn more](#)

## Bug fixes

- When attempting to send a text message broadcast, the compliance modal continued to pop up in an infinite loop when there were recipients in the list with 9 digit phone numbers.
- When using a campaign process to move an opportunity with required checklist items out of a given stage, the campaign process showed it was successful, but the stage on the opportunity did not update.
- Sometimes the first contact added to a campaign would start a sequence that should be skipped after a progression tag applied goal was achieved.
- When selecting the checkboxes on an opportunity to move the opportunity to a different stage, some checkboxes became unchecked upon saving.
